Education

Vishwakarma Institute of Information Technology, Pune

Aug 2023 - Jun 2027

B.Tech in Computer Engineering (Software Engineering)

CGPA: 9.1/10

Relevant Coursework: Data Structures and Algorithms (Advanced), OOP, DBMS, Computer Networks, Operating Systems, Cloud Computing, Artificial Intelligence

Technical Skills

Languages: C++, TypeScript, JavaScript, SQL

Backend & Systems: Node.js, Express, REST APIs, JWT, Redis, Bull (Job Queues)

Frontend: React, HTML, CSS

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Databases: PostgreSQL, MongoDB, MySQL, SQLite

Engineering: Authentication & Authorization, API Design, Caching, Asynchronous Processing, Supertest, Postman

Tools: Git, GitHub, Docker, Axios, Zod

Problem Solving

- Solved 1200+ DSA problems across topics including graphs, DP, trees, and advanced algorithms
- LeetCode Contest Rating: 1957 (Max: 2084)
- Experienced in solving medium to hard problems under time constraints

Project Work

Employee Leave Management System

[🐙 GitHub](#)

React, TypeScript, Node.js, Express, PostgreSQL, Prisma, JWT

- Built a full-stack leave management system supporting employee leave requests, manager approvals/rejections, withdrawals, and HR administration workflows
- Implemented JWT-based authentication and role-based authorization for employee, manager, and HR access
- Designed business logic for leave balances, request states, approvals, rejections, and valid leave lifecycle transitions
- Structured backend functionality into API and service layers to separate business logic from HTTP concerns and improve maintainability
- Implemented automated API testing for core workflows, validation, and authorization scenarios

Task Management System

[🐙 GitHub](#)

React, Node.js, Express, MongoDB, Redis, Bull

- Built a full-stack task management application with JWT-based authentication and access/refresh token lifecycle
- Improved API performance through pagination and database query optimization for task-related operations
- Integrated Redis caching to reduce repeated database access and improve API response performance
- Implemented asynchronous background processing using Bull queues for non-blocking task execution

Leadership

Technical Head

Oct 2024 - Present

Software Engineering Student Association (SESA)

- Organized weekly coding contests with 80+ participants, improving engagement and coding culture
- Designed DSA problems with varying difficulty, aligned with interview patterns
- Mentored 20+ students in problem-solving, algorithm design, and time complexity optimization
